

TRIBOMAR®

Oil Management Solutions

Fuel Sample Kit acc. MARPOL 73/78 Annex VI

- ☒ To retain fuel samples acc. the MARPOL regulations
- ☒ Sealable fuel sample bottles
- ☒ Sealable cubitainers
- ☒ For each bottle / cubitainer seals with unique serial numbers
- ☒ Non tearable and oil resistant labels
- ☒ Scaling on each bottle

Tribomar is offering for the shipping industry an oil sampling kit to preserve samples of each bunkering process. This sample is demanded by the latest MARPOL regulations acc. 73/78 Annex VI.

It is needed appropriate sampling containers like 1000 ml or 500 ml bottles to provide for the laboratory, for the surveyor and the authorities as well for the retention purpose onboard a sufficient amount of sample.

To collect a sample it is needed a cubitainer of 5 L or 10 L connected to the drip sampler which is collecting the bunker sample out of the bunker pipeline.

By this equipment the ship manager / owner is able to prove correct handling and can at any time return on requests of the authorities for samples if necessary. For more information contact Tribomar GmbH.
